DETAILED ACTION

Specification

1. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 6 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 6 recites the limitation "high temperature" twice in lines 3 and 4. The limitation "high" is a relative term and can depend on the context and situation. For example, if a reaction that is normally conducted at -78°C is carried out at 0°C it might be considered a reaction at high temperature. It is therefore impossible to determine the meets and bounds of claim 6. Claim 6 is therefore rendered indefinite.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

3. Claims 1-8 are rejected under 35 U.S.C. 102(a) as being anticipated by Kubo (US 2002/0198403 12-2002). Kubo discloses (Abstract) a process for carry out a variety of reactions using soluble metal catalysts and recovering the catalyst, using an anion exchange resin, for reuse. Adsorption occurs under the condition of the reaction with starting acid and product alcohol acting as polar solvents. Kubo discloses (Paragraphs [0057]-[0059]) the reaction of acrylic acid with propylene oxide in the presence of chromium acetate as catalyst and anion exchange resin at an elevated temperature of 60°C. Kubo discloses the isolation and recovery of the chromium catalyst as well. Kubo specifically suggests [0043] separating the resin from the reaction mixture by distillation. Kubo further discloses [0044] the addition of fresh starting materials (including acrylic acid) to recovered catalyst (distillation residue). Kubo therefore anticipates claims 1-8.

Claim Objections

4. Claims 2, 5 and 7 are objected to because of the following informalities: Claims 2, 5 and 7 recite the limitation "behind distilling" in lines 3, 5 and 2-3 respectively. Applicants should insert the word --after-- between the words "behind" and "distilling" in each instance. Appropriate correction is required.

Conclusion

5. Claims 1-8 are pending. Claims 1-8 are rejected. Claims 2, 5 and 7 are objected to.
